EDUCATION

ENIT, *B.Eng in Software Engineering*
2024 – 2027 | Tunis, Tunisia

IPEIM, *Pre-Eng: Physics & Tech*
2021 – 2023 | Monastir, Tunisia
High Honors (Rang 78)

SKILLS

AI (RAG, Computer Vision)
Cybersecurity
Cloud Computing (AWS)

TECHNICAL STACK

AI

- Fine Tuning
- computer vision
- Automation

Cybersecurity

- Penetration Testing Basics
- Metasploit / Scripting / Burp

CERTIFICATIONS

Certified Associate Penetration Tester (CAPT) - Hackviser

CCNAv7 Introduction to Networks (Cisco)

CCNA: Switching, Routing, and Wireless Essentials

SOFT SKILLS

- Teamwork
- Time management
- Communication

AWARDS

CyberCriminalite & Gouvernance, ESPRIT

Cyber Camp 6.0, INSAT

Cyber Horizon, FST

GOAT-1.0, Supcom

PROFESSIONAL PROFILE

Software Engineering student at ENIT focused on Artificial Intelligence, with strong interests in Cybersecurity, Automation, and Embedded Systems. Driven to design and develop intelligent, secure, and reliable solutions by combining AI technologies, software engineering, and cybersecurity principles. Passionate about using AI and automation to optimize processes, solve real-world problems, identify security vulnerabilities, and build efficient and resilient systems.

PROFESSIONAL EXPERIENCE

Network & Security Infrastructure Intern, TAV Airports

07/2025 – 08/2025 | Enfidha, Sousse

Analyzed the parking camera and network infrastructure to identify security vulnerabilities, reliability issues, and integration risks.

KEY PROJECTS

Vision-to-Infrastructure Pipeline (PFA 2)

2025 – 2025

Built a graphical interface that accepts either an architecture image or an input prompt, uses fine-tuned YOLOv8 and RAG to translate real network infrastructure into cloud equivalents, then generates a deployable Terraform and Ansible configuration.

Confidence-Gated Super-Resolution Enhancement for Tracklet-Level Jersey Number Recognition

06/2026 – 08/2026

Enhanced the Koshkina and Elder (2024) jersey number recognition pipeline by integrating ESRGAN super-resolution as a preprocessing step to improve accuracy under challenging broadcast conditions like motion blur and low resolution. The pipeline detects players, applies ESRGAN upscaling, then performs jersey recognition and pose estimation, resulting in significant accuracy gains for real-world soccer analytics applications.

AI powered penetration command

06/2026 – 07/2026

An AI-powered command-line penetration testing framework for web applications, inspired by tools like Metasploit. It combines multimodal LLMs, Bash scripting, and LLM frameworks to automate reconnaissance, security testing, vulnerability analysis, and attack workflows through an intelligent command-driven interface.

ORGANISATIONS

Securinets ENIT

Active member in the cybersecurity club, participating in security-related activities, workshops, and events.

FabLab ENIT

Helped organize Aero-Fab, a robotics competition including junior line-follower robots and all-terrain robots.
